

Setting Up a Hugging Face Token

1. Creating a Hugging Face Account

- Navigate to <https://huggingface.co/>
- Select "Sign Up" and create an account
- Verify your account using the confirmation email sent to your registered email address

2. Accessing Llama 3.2 1B

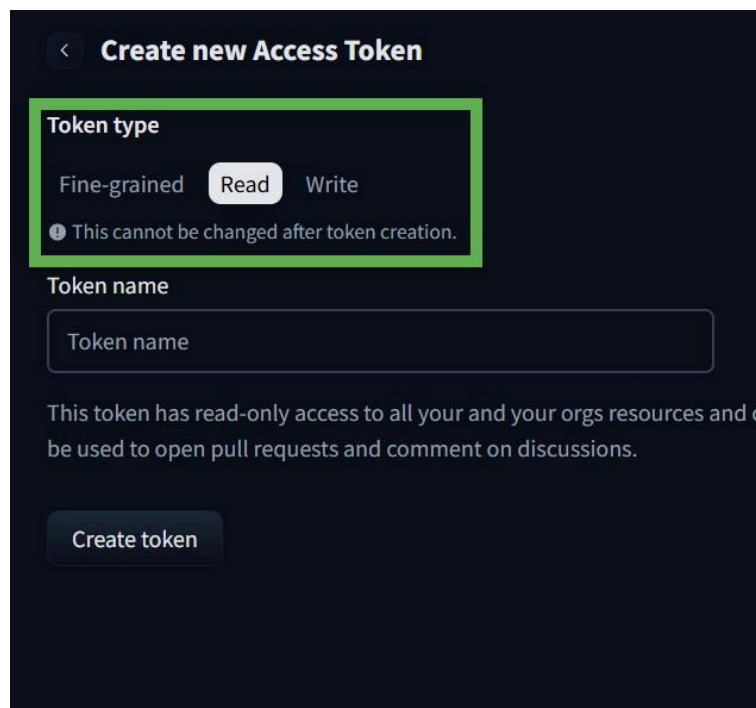

- For this lab session, the model used is Llama 3.2-1B-Instruct
- Search for "Llama 3.2 1B Instruct" on the Hugging Face website or go directly to: <https://huggingface.co/meta-llama/Llama-3.2-1B-Instruct>
- Select "Expand to review and access"
- Scroll down and complete the required form
- Submit the form to request access

3. Generating an Access Token

- Navigate to Settings, then select the “Access Tokens” tab (<https://huggingface.co/settings/tokens>)
- Select “+ Create new token”
- Under “Token Type”, select “Read”
- Enter a token name (ex. “Fine Tuning Workshop”)
- Once created, copy the token.

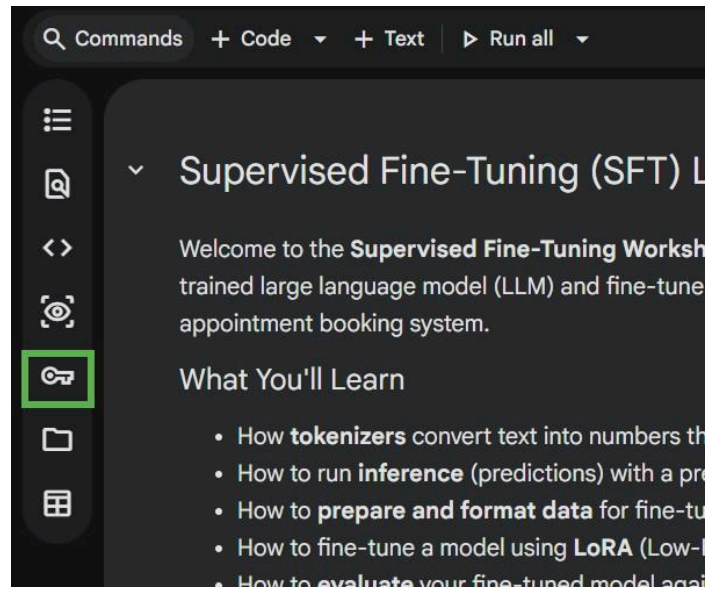

Note: The token will not be visible after creating it.

The screenshot shows the 'Create new Access Token' interface. At the top, there's a back arrow and the title 'Create new Access Token'. Below this, the 'Token type' section is highlighted with a green box. It contains three options: 'Fine-grained', 'Read' (which is selected), and 'Write'. A warning message below the options states: 'This cannot be changed after token creation.' Below the 'Token type' section is the 'Token name' section, which has a text input field with the placeholder 'Token name'. Below the input field, there is a descriptive text: 'This token has read-only access to all your and your orgs resources and can be used to open pull requests and comment on discussions.' At the bottom of the form is a 'Create token' button.

4. Configuring the Token in Google Colab

- Open your Google Colab notebook
- In the left sidebar, open the “Secrets” panel (key icon)
- Select “Add new secret”
- Name the token as mentioned in the notebook (in this case, “HF_TOKEN”)
- Paste the copied token in the value field
- Enable “Notebook Access”

5. Note

- In case you lose your copied token, create another one.
- Access tokens are meant to be private. Do not share your access token.
